Traffic jams have appeared in many places of our country. So in the future, many interesting means of transport will be invented by humans.

My dream means of transport is a smart cycle. In my opinion, it will be powered by solar energy and wind energy to avoid pollution and save fuel. Two people can sit on it. We can use it any when and anywhere. It's won't take a lot of space. With the use of modern technology, this smart cycle will be able to help us many things and it will make our life become better. Although students were not able to speak directly to the teacher, we were provided with clear instructions for the assignments, along with detailed teaching materials and friendly prompts prior to assessment.
